

Feedback

Client Feedback

Unfortunately, the group was unable to receive client feedback on this design. However, we do not believe this to be detrimental because the client was not worried about having in-depth user interaction, the client is more concerned with the “steampunk aesthetic”. Therefore, having the client view this prototype was not necessary.

User Feedback

To find user feedback, we found a young person in University to test out the heart rate sensor. We chose a young male to be our test user because we believe that in reality, at the Gala it would be a young man using our wearable.

The User tested out the heartrate sensor and his comments were as follows:

- “The heartrate sensor is a bit inaccurate when put on my neck.”
- “The heartrate sensor fits well on my earlobe with the earlobe clip, and seems to work more accurately.”
- “The sensor works well on my finger, but it gets in the way a bit when it’s there.”
- “The LED pins seem to be pretty accurate.”
