# Deliverable G

Jake Lund, Dominic Roy, Mahmoud Younis, Gilles Tang

Project Group 16

For the second prototype, we decided to improve and work to improve the first prototype, we therefore decided to work on adding more features to the first prototype. Many steps were taken in terms of the integration of our loyalty program with other ones both mathematically and in terms of design.
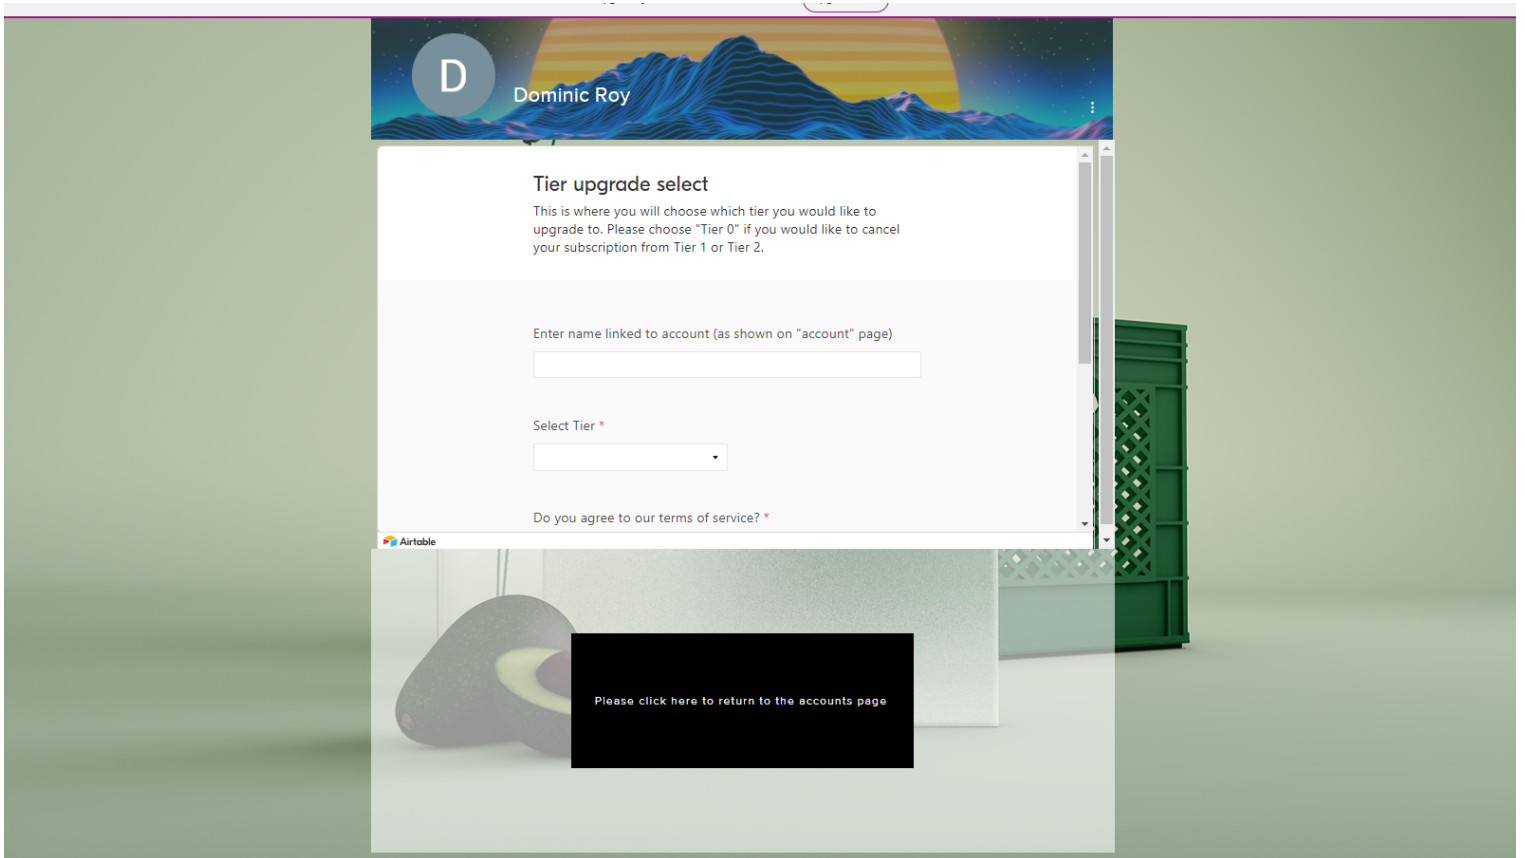

Login and Sign up Page
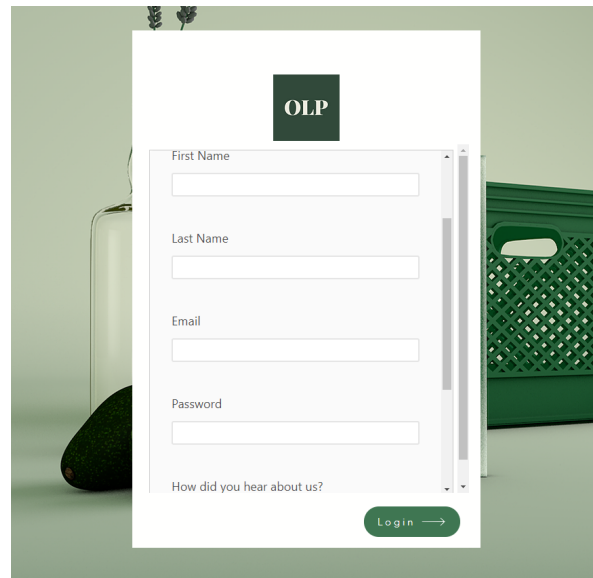

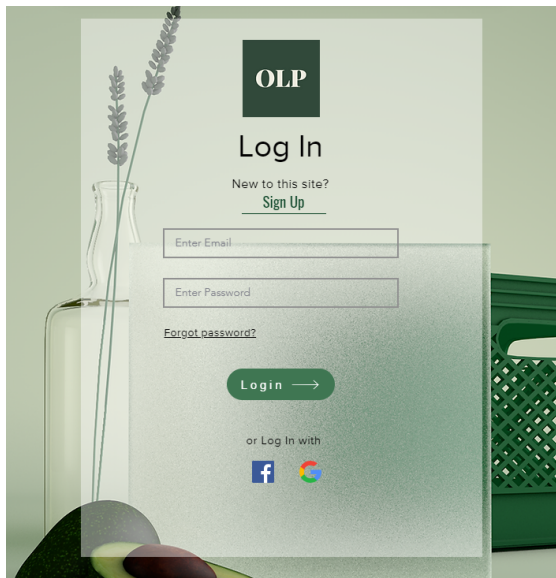

- The login page and the sign up page include the basic functions a website should have, like login, sign up, forget password and other login selection.
- The form in the sign up form will collect the information of the user and protect their property.
- To be added: Welcome Page and Forget Password Page

GNG1103

Home Page
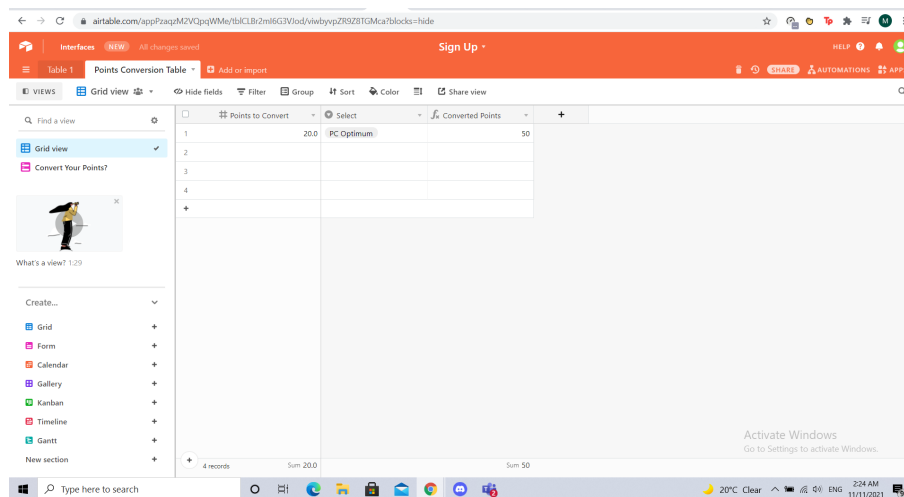

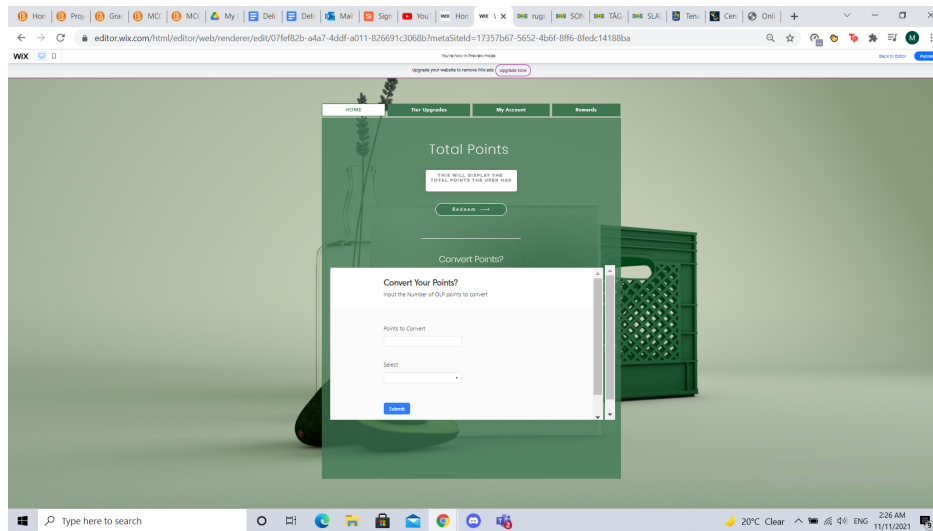

- We added a new way to input points to convert
- A form was created for the points conversion
- The form submission goes into a database that integrates all of the user information using Airtable.

Tier upgrade improvements

- Improvements were made to the tier upgrade page
    - A database was made along with a form by using Airtable.
    - The form was embedded into the site inside of a private webpage. It is only accessible through the tier upgrade page.

- The database creates a profile of what the user chose, if they accepted the "Terms of Service" and if they would like to receive emails (maybe add a email bot in the future)

Redeem Page improvements:
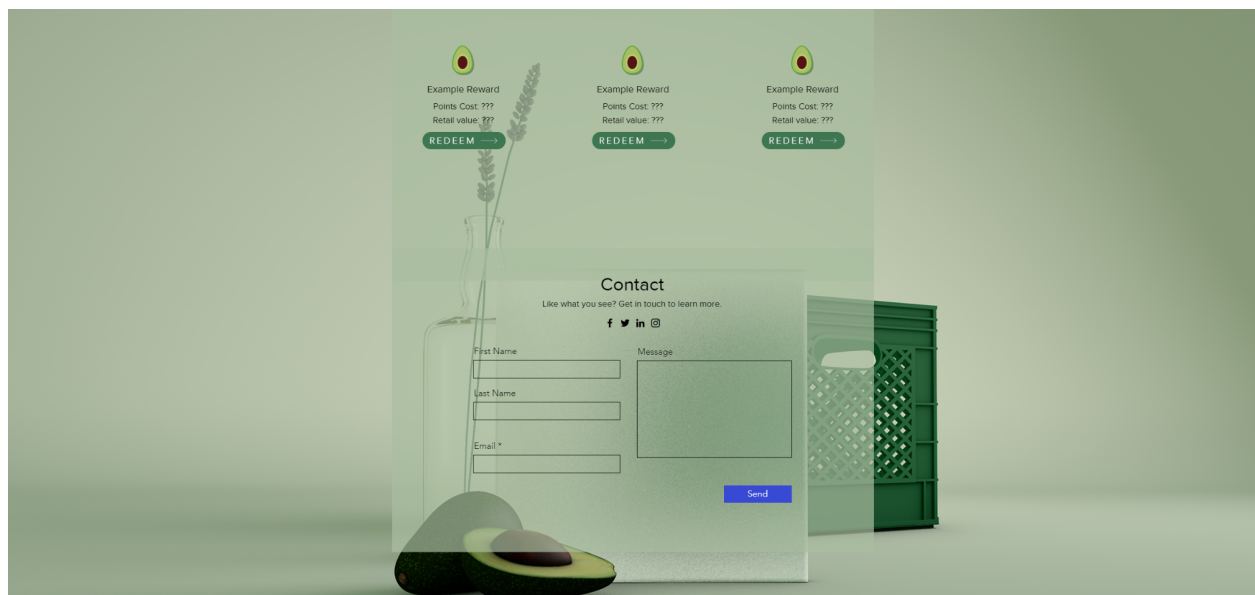

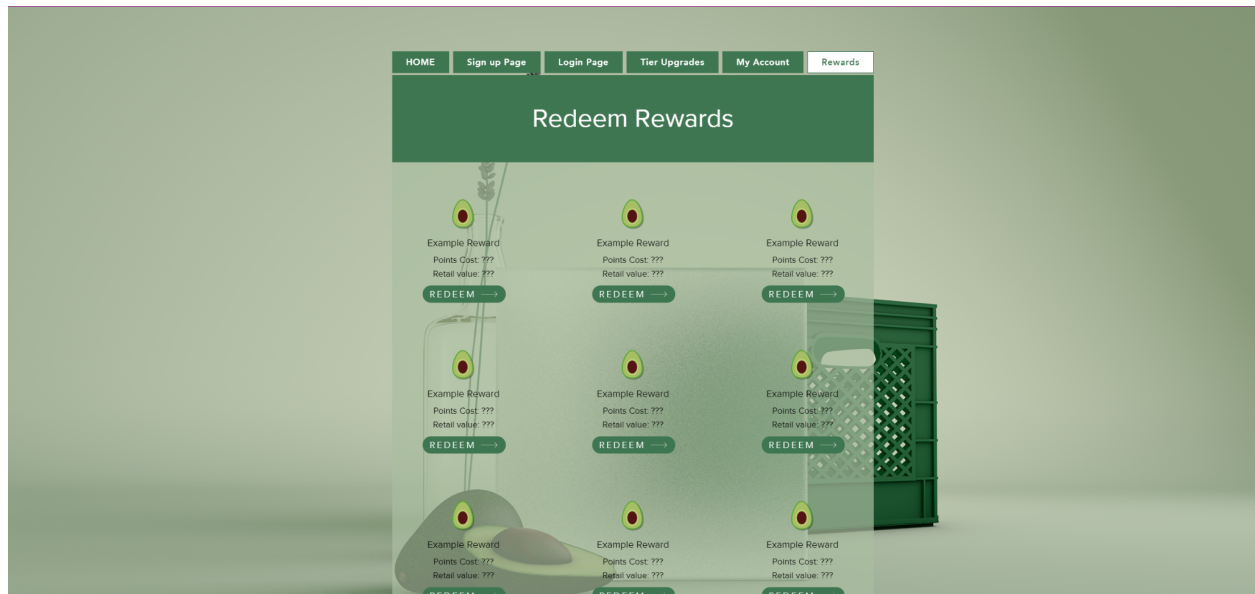

- Changed the placeholder vector art to fit the theme of the site
- Added buttons which will allow the user to purchase rewards and will be connected to the AirTable data
- Re-sized elements to make everything feel evenly spaced
