VERTIGRO

OUR DESIGN

SIMPLE

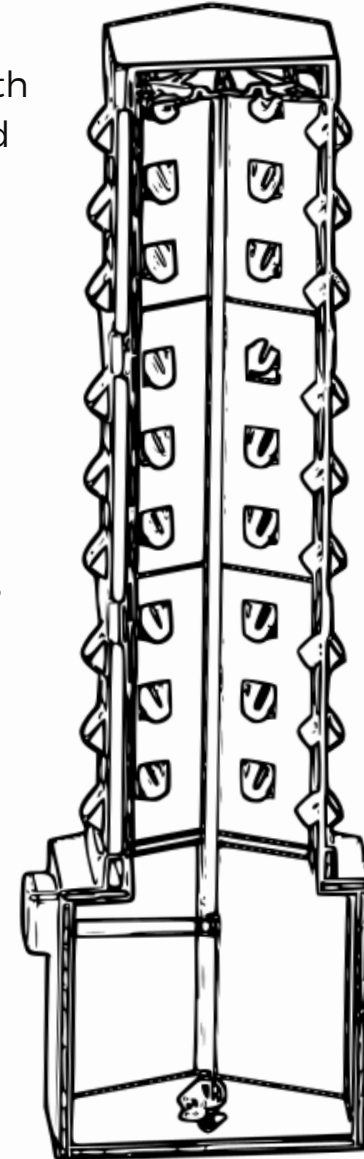

Our tower relies on only one pipe to provide each plant with the right amount of water and nutrients for ideal growth.

STACKABLE

What sets us apart from other products is that our system is made of stackable units. This means that you can decide how high your Vertigro stands and grow up to 54 plants in just 2 square feet of space!

& SLEEK

The modern hexagonal design is not only visually appealing but is also highly practical, creating a stunning blend of form and function.

A HANDS-OFF SYSTEM

LOOKING FOR A SMARTER, MORE SUSTAINABLE WAY TO GROW YOUR FRESH PRODUCE?

With Vertigro, get ready to enjoy faster growth, higher yields, and a soil-free way to harvest fresh produce year-round!

At the heart of our project is a commitment to sustainability and community. Our primary goal is to provide an easy and efficient way for an indigenous association in Ottawa to grow crops and educate its community in the city on planting and food security.

GET TO KNOW THE UI!

Experience the convenience of complete control at your fingertips with our state-of-the-art touchscreen system. Our system allows you to effortlessly manage nutrient supply, pH level, pump activity, and much more!
